

# **CHAPTER 11.**

## **MARINE BIOLOGICAL RESOURCES**

---

### **11.1 INTRODUCTION**

This chapter contains a description of the potential environmental consequences to marine biological resources associated with implementation of the alternatives within the region of influence (ROI). For a description of the affected environment for all resources, refer to the respective chapter of Volume 2 (Marine Corps Relocation – Guam). The locations described in that Volume include the ROI for the Army Air and Missile Defense Task Force component of the proposed action, and the chapters are presented in the same order as the resource areas contained in this Volume.

### **11.2 ENVIRONMENTAL CONSEQUENCES**

The proposed action involves construction and operations that would occur on land only. The proposed locations are in the central and northern portions of the island, and the anticipated effects would not extend to the coastline. Indirect impacts associated with stormwater runoff into the marine environment are addressed collectively for all resources in Section 4.15 of Volume 1. Therefore, an analysis of marine biological resources is not presented in this chapter.
